

stûv

[9] S

The s[6]l is a compact, wood-burning fireplace designed to bring the essential pleasure of fire to smaller spaces. Its clean lines and minimalist form place the flame at the centre, offering a generous view of the flames without visual distraction. Available in freestanding and built-in configurations, it adapts effortlessly to a wide range of interiors while maintaining the purity of the flame.

The essential fire

[SIMPLE]

Simplicity guides every decision in the design process. From the refined geometry of the appliance to its streamlined installation, intuitive operation and minimal maintenance requirements, each element is resolved with clarity and purpose.

[PANORAMIC]

A wide glass window, tapered frame and curved combustion chamber work together to offer a generous view of the fire relative to the unit's size. Uncluttered and precise, the opening brings warmth and movement into the space without visual distraction.

[POWERFUL & EFFECTIVE]

Despite its compact dimensions, the Stûv 6 delivers impressive performance. Its cast iron combustion chamber is engineered to maximise heat output while maintaining excellent efficiency, providing consistent warmth and an exceptionally clean burn.

[UNIQUE]

From its distinctive combustion chamber design to its shallow profile and considered details — such as the cool-touch handle and discreet controls — the Stûv 6 stands apart in its class.

[INGENIOUS]

A lightweight support casing separates from the heavier inner combustion chamber, simplifying installation and allowing the appliance to integrate easily into existing hearths and chimneys.

[MULTIFACETED]

Available in freestanding or built-in configurations and in multiple sizes, the Stûv 6 adapts effortlessly to a wide range of spatial and architectural contexts.

[CLEAN]

A controlled internal airwash system keeps the glass clear, ensuring the fire remains a consistently crisp focal point within the space.

s[6] - Inserts

76/55

86/60

When you choose Stûv, you can enjoy guaranteed quality and simplicity.

Engineered to retrofit seamlessly into traditional open fireplaces, the s[6] is available in two insert options.

Combining elegance with performance, each fireplace features a distinctive bevelled door frame and a curved cast-iron combustion chamber that enhances the visual breadth of the flame. When connected via the optional outside air intake, these units deliver exceptional performance - further increasing their efficiency and making them suitable for passive house projects.
