S [22]

The
essential
fire

[SIMPLE]

Simplicity lies at the heart of our design philosophy. This is reflected in the product's form, as well as its ease of installation, operation, and maintenance.

[ARCHITECTURAL]

The insert is available in a variety of formats and configurations, making it suitable for a wide range of projects. The cladding options simplify installation and offer extensive possibilities in terms of materials used around the firebox.

[POWERFUL & EFFECTIVE]

Fire bricks line the combustion chamber, allowing heat to be distributed rapidly and efficiently. Optimised air channels ensure efficient combustion, while the damper allows precise control of heat output across a wide range to suit your needs.

[INNOVATIVE]

The runners and operating mechanism for the retractable glass are integrated within the door frame, ensuring easy access. This patented Stûv technology remains completely invisible, providing a full view of the fire while maintaining an exceptionally high-performance seal.

[INGENIOUS]

The glass slides upwards for easy loading and barbecue mode. The door can also tilt forward, making cleaning the inside of the glass quick and convenient.

[CLEAN]

A curtain of fresh air flows over the glass, helping to keep it clear and ensuring an uninterrupted view of the flames.

s[22]-110

Choosing Stûv means ensuring a very high level of satisfaction.

The S[22]-110 wood-burning insert stands out for its technical excellence and refined aesthetic. This fireplace, featuring retractable glass, incorporates a highly advanced sealing system and offers an uninterrupted view of the flames. It has been thoughtfully designed to maximise both heating performance and user enjoyment.

With its chameleon-like versatility and a wide range of cladding options, it blends seamlessly into interiors where every detail matters. A selection of accessories—both practical and elegant—completes the overall design.

A close-up, low-angle shot of a fire burning brightly in a fireplace. The flames are a mix of bright yellow and orange, with some darker, charred wood visible. The fire is contained within a dark, possibly black or dark brown, metal firebox. The foreground shows the dark, textured surface of the fireplace's front panel, which has a small, rectangular, recessed area on the left side. The overall lighting is warm and focused on the fire, creating a cozy atmosphere.

One firebox, many fireplaces

Frames

The various frame options available for s[22]-110 bring seamless perfection to the integration of the fireplace within your wall.

S4

Slim frame for minimalist finish

C2

Traditional chimney breast

D4

Slim frame with integrated niche (left or right)

D3

Slim frame with open corner niche (left or right)

Fascia claddings

The fascia cladding make installation easier: it effortlessly conceals the wall cavity that house the fireplace, thereby avoiding the need for any wall finishing work. It also creates a distinct visual element that contrast with the wall and draw attention to the fire. Fabricated in steel by the Stuv team, fascia claddings are available in standard or custom sizes and colours to integrate perfectly with your interior design.

Freestanding claddings

The ready-to-fit freestanding cladding is a great way to install your fireplace without the need for any major building work. This smart solution removes the need for any masonry, carpentry and wall finishing work. The fireplace installation becomes a breeze, whether it's against a wall or at the centre of the room. The freestanding cladding can even incorporate a log storage for extra convenience.
